Oak Canyon Planking

Available in various thicknesses—8" Wide & up to 45" Random Lengths

It's finally here! - Oak Canyon Thin Planking

The long-awaited thin tile version of our planking, made from the beautiful Oak Canyon countertop slabs—**Quarried here in America!**

These unique Natural Stone tiles are finally available!. Previously found only in 3cm and 6cm thickness, the new 1/2" planks can now be utilized in virtually any application tile is used—interior or exterior. The planking comes standard in 8" widths, and random lengths, varying between 18" and 45". The surface is a "brushed" or "leathered" finish, with an amazing texture, like you would find with wood grain.

The craze is building.

Now with national attention...

The DIY Network has taken an interest in the beauty and versatility of this stone, from its countertop applications, to the planking.

While at the Hardscapes North America trade show in Kentucky, the DIY guys spent time shooting an interview about the product and the company.

Check us out online, see what the buzz is all about. Shoot us an Email or call us!

Natural Thin Veneer Stone was created as a superior alternative product to man made, fake stone. It has been popular for Architects to involve fake or cultured stone in a project. Early applications of cultured stone were popular on commercial or residential jobs because of it's light weight and easy installation. Today, time has shown the inherent weaknesses of those man made products.

Fake stone (cultured stone) is a painted or dyed cement product that clearly fades, cannot be cleaned with harsh chemicals available, and when chipped, looks old with the cement interior exposed. Those inherent weaknesses prompted the stone industry to move to mining building stone and cutting it as thin as the cultured stone. It has revolutionized the building stone industry to a point now that an architect can design in "all natural thin stone" in place of cultured stone. The finished project will have the look, beauty and timeless elegance that only natural stone can give. Each selection can be used for interior or exterior applications. All natural stone veneer can be applied to both masonry and wood surfaces without the need for a ledge or wall ties.

"Thin Veneer Stone" is cut with an approximate thickness of between 3/4 inch and 1-1/2 inch. You have available both flats and corners with each color selection. The weight of this natural mined product varies between 9.5 and 13 lbs. per square foot, depending on the stone selection you choose. Sold in 10 square foot increments or 100 square foot crate. Corners are sold by linear foot in 1 linear foot increments or by 50 linear foot crate.

Taking thin stone veneer one step further...

The new Designer Series veneer features sawn edges on all sides, cut in linear fashion, providing a unique and modern look. In all of the varieties we offer, all of the blends, you see fresh and elegant twist to the timeless look of natural stone. From architects, to designers, contractors, and homeowners, this series of veneer will fit that perfect niche that is now being sought after.

The true beauty of ageless stone – with the sleekness of modern design.
