

Helpful Conversions:

- (54) 1/2 Cubic Foot Bags = 1 Cubic Yard
- (36) .75 Cu.Ft. 5 Gal. Buckets = 1 Cubic Yard
- (9) 3 Cubic Foot Bags = 1 Cubic Yard
- (13.5) 2 Cubic Foot Bags = 1 Cubic Yard

Bulk Material Coverage:

- 1 Cubic Yard of gravel, dirt or mulch covers:
 - 162 Square Feet at 2 Inch Depth
 - 129.6 Square Feet at 2-1/2 Inch Depth
 - 108 Square Feet at 3 Inch Depth
 - 81 Square Feet at 4 Inch Depth

Coverage based on exact, flat depths. We recommend that you add an extra 5% to be sure you have enough to fill in any dips or holes in the ground and to account for any uneven spreading.

STONE PLUS®

"Your source for stone, hardscape & landscape supplies"

The Stone Plus Difference

Being a supply only company, we understand that the need of an extensive inventory is just part of the package. Our strength lies in the quality of that inventory and our ability to deliver that inventory to your site in a timely and professional manner. From the employee who receives your order, all the way through the delivery personnel, we have one thought in mind, to ensure that Stone Plus has a satisfied customer.

Extraordinary customer service, honesty, integrity, quality, quantity and variety are the standards that Stone Plus began with and continues to operate on today. The minute you walk through our doors the staff members make you feel welcome and comfortable.

We have improved on the old saying "give the customer what the customer wants". Our version is "give the customer what the customer needs". This creates real value instead of just perceived value.

When you have an idea, Stone Plus is where to start. With our knowledgeable staff we can help guide you from concept and design, through "how-to" and maintenance. The facilities are neat, clean and well organized so products are easily accessible. Staff members are ready to help with any questions or loading materials into your vehicle.

	North of 206 and South of 16 or Vilano Beach.....	\$ 82.00
	North of 16 or Vilano Beach.....	\$106.00

All other areas are mileage based (1 way)..... \$3.70/Loaded Mile

Forklift for delivery. May be required for heavy loads, boulders, bulk items in hoppers, etc. This fee is in addition to standard delivery fee. (Minimum 8'6" Wide path required) Add \$ 51.00*

*Boulder Placement Surcharge:

Three boulders will be placed alongside the forklift fee. Any additional boulders will be \$17.00 each.

When diesel fuel exceeds \$3.00/gal, Stone Plus reserves the right to add a fuel cost recovery charge on all deliveries.

For large orders we may need to dropship to your location. Before ordering large quantities of bulk materials or more than 10 pallets of palletized items, please contact us several days in advance of your desired delivery date.*

**Dropship orders can take from 1 to 15 days, depending on the origin location and if it is a special order item or not. Most dropships are done by large tri-axle dump trucks or tractor-trailers. You will need a minimum amount of space to accommodate those vehicles. Trailer dumps can require approximately 40 Feet of vertical clearance at drop point and up to 80 Feet for turnaround.*

How much material do I need?

How To Calculate Quantity Needed

Gravel, Mulch, Sand & Soils

Figure out the square footage to be covered.

Multiply the square footage by the depth desired (in feet) [feet=inches/12] to get the cubic footage.

Divide the cubic footage by 27 to get the cubic yards needed.

Example: A rectangular landscape bed is 12' 8" long and averages 5' 6" wide and the depth desired is 2 ½" deep.

$(12.66' \times 5.5') = 69.3$ square feet

$(69.3 \times .208) = 14.414$ cubic feet

$(14.414 / 27) = .534$ cubic yards needed

Flatwork (Patios, walls, etc.)

Figure out the square footage to be covered

Get the coverage per ton of the product desired

Divide the square footage needed by the coverage per ton

Example: A patio or wall is 20' long and 8' wide or high and you would like to use Buff Patio flagstone that has a coverage of 110-130 square feet per ton.

$(20' \times 8') = 160$ square feet

Average coverage is 120 square feet per ton

$(160 / 120) = 1.333$ tons needed

Stacked Stone Walls & Waterfalls

Determine the average length, the average height and the average width of the stone in feet.

Multiply the length by the width by the height to get the cubic footage.

There is about 15 cubic feet in a ton of building stone or flagstone so divide the cubic footage by 15 to determine the quantity of stone needed in tons.

Example: A 20' long stacked stone wall that is 1' thick and 2' tall

Length = 20', Height = 2', Width = 1'

$(20' \times 2' \times 1') = 40$ cubic feet

$(40 / 15) = 2.667$ tons of stone needed
